

7. Project Documentation Phase

Outcome

- By completing this lab, learners gain a comprehensive understanding of how script-controlled READ, WRITE, CREATE and DELETE ACLs enforce record-level security.
- User roles and record field values are evaluated together to make access decisions.

Result

- The Script-Controlled ACL lab is completed by configuring READ, CREATE, WRITE and DELETE access controls for the u_institution_details table.
- The configured roles and script-based conditions are used to control access to the records.

Conclusion

- This lab provides practical understanding of ServiceNow security and ACL configuration.
- It shows how different user roles can be assigned different permissions and how a script can be used with a field condition to control access to specific records.
